### Provide a calculation used to determine the value of one water equivalent residential connection (ERC).

Use one of the following methods:

- (a) If actual flow data are available from the preceding 12 months, divide the total annual single family residence (SFR) gallons sold by the average number of single family residence customers for the same period and divide the result by 365
   (b) If no historical flow data are available, use: EBC = (Tatel SER culture and (Omit 000) / 265 data (250 culture are data))
- <sup>b)</sup> ERC = (Total SFR gallons sold (Omit 000) / 365 days / 350 gallons per day )
